When we sat down to discuss our approach for [Bipolar Disorder For Dummies](#), we considered the audience for the book and decided to address both those who have been diagnosed with bipolar disorder and their friends and family members. One of the most challenging aspects of bipolar disorder is that although only one person might carry the diagnosis, friends and family members are all affected by it in some way and all play an important role in reducing stress and assisting the person who has bipolar obtain and maintain treatment. Both of us (Candida in her practice and Joe in his family) noticed that family members, simply by being uninformed, can unwittingly increase the stress that often triggers a mood episode. This is not to say that loved ones cause bipolar disorder, but research shows that a strong support network improves the treatment outcome. We wanted to ensure that friends and family members are well aware of their roles and responsibilities. By becoming better informed, through our book and other sources of accurate information, family and friends can learn more effective techniques for communicating with one another and building a more effective support network. [Bipolar Disorder For Dummies](#) is a comprehensive how-to manual that discusses the diagnosis and the most effective treatment options currently available. We believe that medication alone is very helpful but often not completely effective, for whatever reason, and we recommend several therapies in addition to medication, including cognitive behavioral therapy, social rhythm therapy, and relationship and family therapy. We also discuss alternative therapies, some of which are complete bunk and others of which some people with bipolar disorder have found helpful. By presenting the available tools and helping readers steer clear of useless or counterproductive alternatives, we hope to enable those with bipolar disorder and their families, along with the guidance of their qualified doctors and therapists, to structure a treatment plan that works most effectively for all involved.
